SEVEN THE MAGIC NUMBER IN LIFE

Figures in Birth and Death and
Many Other Affairs of Human
Importance.

Away back in the dim and shadowy
past, when man, long armed and crook-
ed legged, was the weakest animal that
trod the earth; before ever he had
learned the use of weapons to defend
his life to the end; when he skulked
in terror through the primeval forest
and slept sitting, elbows on his
knuckled knees and long, claw-like
fingers clasped over his head as a pro-
tection from wind and rain, he began
to make a faint conception of number.
He had no use for his conception of
any number but the concrete. In his
really strenuous life numbers were a
superfluous till he had something to
number and to count, according to the
St. Louis Globe-Democrat.

He, perhaps, first counted the toes on
his spiny feet or the fingers on his mis-
shapen hands, but what were the con-
crete things that the seven stood for
that he should regard it with an awe
that but little diminished has come
down to us?

In his immature mind this number
was associated with material things, his
whole being stirred with awe in con-
templating them; but what were they?

Superstition and Science Meet.

Nebulous superstition and solid
science meet and mingle in the magic
seven. The seven visible ages of
earth's creation may be tinged with pre-
conceived ideas from the account in
Genesis, the seven ages of man may
be an arbitrary division deferring to
superstition; but the fact that nations
and races that have never heard of or
reject the Moslem account regulate their
daily lives in weekly cycles of seven
days shows that this number has a uni-
versal and unique importance in the
life of man.

With a cry the babe proclaims its ad-
vent, but not until seven times seven
days can it shed tears, nor does the
smile of intelligence appear until seven
weeks have passed. One-half the births
die before they reach the age of seven,
and the Good Book fixes the span of life
at ten times seven years.

Even the atavistic influences in the
human family run in cycles of seven.
One in seven of the births has eyes of
a color different from the parental, and
leaves the optical line of a remote an-
cestor.

Religious creed cannot overcome the
influence of the magic number. In both
Protestant England and Catholic France
seven per cent. of the births are illegiti-
mate.

In the artificial epochs that the neces-
sities of society have established in the
life of man the number seven holds a
conspicuous place. Infants are held to
be incapable of a knowledge of "good
and evil" or contributing to their own
support till seven years of age, and the
male does not come into the full dignity
and responsibility of manhood till three
times seven.

A citizen cannot become President
until he is five times seven years of
age; in most States seven years open
adverse and forfeitable possession gives
a title to real estate; a "homestead"
is allowed seven years to "prove up";
and twice seven months to commute to
a cash entry.

Morals and Affections.

The morals and the affections of the
human family seem dominated by the
instincts, insistent seven. A tendency
to crime is greatest at four times seven,
when the greatest stature is reached,
then declines until it ceases at nine
times seven. In the face of the strong-
est circumstantial evidence the accused
was acquitted in a French court for the
reason that his life had been blameless
until that age. It was held that a man
would not fall after nine times seven
years of exemplary life.

The average physical strength of
woman is seven-eighths that of man
and her tendency to crimes by violence,
compared to that of man, is in the same
ratio. When driven to the awful ex-
tremes of self-destruction one-seventh
of sane women as men commit suicide
by violent means. Woman's chances
in the matrimonial lottery are greatest
at three times seven years; then de-
crease until seven times seven, when
they practically cease.

The great American lakes are subject
to a "flood" and flow at intervals of
seven years, the cause of which lies so
far behind solution, but the years of
highest and lowest water are seasons of
treasure or of trial in the "lake region."
In the practical sciences seven holds
a commanding position. When a land-
surveyor wishes to reduce a line of
which the variation is lost or unknown
he has recourse to "the rule of seven."
For one fourth mile, twice the number
of links in error, minus one-seventh, is
the correction in minutes for the true
course. For one-half mile, the number
of links in error minus one-seventh, is
the correction, and for a mile half the
number, minus one-seventh, is the cor-
rection.

The number of bars of rails required
to lay a mile of track is found by mul-
tiplying the weight per yard by eleven
and dividing by seven, and where there
is a double "turnout" from the main
track the number of the middle "frog"
is seven-fifths that of the other two.

But while the "magic number" lends
its aid readily to the solution of prob-
lems, constantly arising in daily life,
it repels familiarity in the form of
figure puzzles. It is easy to ascertain
the number of a number is divisible
by any of the other digits, but seven
resists to some such rule. The only
way to find if a number is divisible
by seven is to try it.

Back to the man whose first slumber
was filled with dreams of the magic
number, we look in vain for a solution.
It is the most potent of the numbers in
Bible, War, The Seven regarded seven
with awe, and the Apocalypse was writ-
ten for the benefit of "The Seven
Churches of Asia." Joy and grief, pain
and pleasure were measured by seven.
The seventh heaven was the name of
earthly pleasure; the limit of earthly
disaster was when "Seven women shall
take hold of one man, saying, 'We will
wear our own apparel!'"

By Authority

NOTICE.

BRIDGE CLOSED.

From now and until further notice,
the Haleiwa Bridge will be closed for
repairs.

G. H. GERE,
City and County Engineer.
Feb. 5th, 1910.
